## Duplo (Raised Spot UV)

Raised spot UV. Bold geometry wins. Test on target stock.

### What it is

Digital raised UV coating (e.g. DuSense) — creates tactile glossy raised elements without dies.

### Quick limits

- Matte/soft-touch stocks preferred (200–350 gsm)
- Min font ~8 pt, min line ~0.5 mm
- Keep 3 mm+ from cut/fold lines
- Max height ~100 microns

### Do

- Use grayscale for variable height (darker = thicker)
- Create subtle patterns over solids
- Test on your exact stock
- Combine with foil for hybrid luxury

### Don't

- Avoid gloss laminated stocks (effect disappears)
- Don't place near edges or folds
- Avoid very fine detail / small text
- Don't over-apply thickness in tiny areas

Always confirm tolerances with your print provider.
